In a recording sheet provided with a colour material acceptable layer on the support, the sheet is characterised in that the colour material acceptable layer is made of inorganic particulates and water soluble resin, which is modified \*\*\*polyvinyl\*\*\* \*\*\*alcohol\*\*\* having an ethylene unit as a repeating unit by mole ratio of 1- 20 wt.% and having \*\*\*saponification\*\*\* value of more than 85%. The inorganic particulates are preferably silica particulates with a mean primary particle dia. of less than 10 nm. The weight ratio of the particulates and the water soluble resin is 1.5 : 1 - 10 : 1.

USE - The sheet is used for \*\*\*ink\*\*\* - \*\*\*jet\*\*\* recording, heat transfer recording or electrophotography recording.

ADVANTAGE - The sheets form accurate images with no absorption nonuniformity, stains or ink bank. Moreover, they have excellent durability without reducing recording characteristics.
